

Mobile Device Security

Due to the fact, that a significant amount of people are using their mobile devices in the way in which they previously used their computers, it is extremely important that we secure these devices against theft and attack.

In this lab, you need to do the following:

Select a mobile device that you own or would like to own. Use the internet to research its available security settings.

Create a document which lists the different settings, why they should be used and how they are configured.

Discuss 2 apps which are available for your mobile device which could enhance the security or privacy of the device.

Note: You will not receive any marks for information copied and pasted from the internet.
